INTRODUCTION To Psychology

BSE : 8th SEMESTER

27/1/26

* It is the study of human behavior and their interaction in real world.
* Human Behavior and mental Processes **(Psychology)**.
* States (Physical, Mental) are how affected by the environment and will produce effects accordingly, will be studied in this course.
* Psychology talks about similarities and differences of human.
* "Psyche" means soul or mind and "logous" mean studies.
* Soul (Emotions, feelings, experiences)

Why Psychology?

→ It helps to evaluate common beliefs. (Culture means social norms) It comes from religion

(on which we trust, we values it and think it truth)

→ To study competition and related opposition.

⊙ **Basic Goals:**

(i) → Describe
(ii) → Explain
(iii) → Predict
(iv) → Change (Influence and control behavior and mental processes)

⊛ Direct observation (Empirical Data)
⊛ Write 5 definitions of Psychology.

5 Definitions of Psychology

① **William James (1890):**
→ "Psychology is the science of mental life, both of its phenomenon and their conditions"

② **Clifford T. Morgan (1961):**
→ "Psychology is the science of human and animal behavior, it includes the application of this science to human problems."

③ Hilgard, Atkinson (1975):

→ "Psychology is the scientific study of behavior and mental processes."

④ John B. Watson (1913):

→ "Psychology as the behaviorist views it is purely objective experimental branch of natural science. Its theoratical goal is the prediction and control of behavior."

⑤ David G. Mysers (2004):

→ "Psychology is the science of behavior and mental processes."

write also Sigmond Fd

* Assignment Project (4 members) (Topic will be assigned) + Quizzes.

⑥ Sigmond Frued (1923):

→ "Psychology is the study of unconscious mind and the process by which behavior is motivated"

29/1/26

⊛ Critical Thinking:

→ Different perspective of different people on same topic.

→ Behind specific thought, there is a logical or reasoning.

→ **E.g:** Class attendance is not much, maybe because of following reasons:

(i) Due to some personal reasons

(ii) Thinking course not important.

(iii) Teacher soft behavior. etc...

→ Main topic is behavior of Psychology.

→ Logic → Evidence → Direct Observation

⊛ Thinking/Scientific Method: (Research Process)

① → Critical Thinking (Logic → Evidence)

② → Asking Questions (Research Question)

③ → Term Define

④ → Examine Evidences

⑤ → Analysis

(6) Avoid Emotional Reasoning
(7) Avoid Complex Problem/Ideas (Avoid Oversimplification)
(8) Consideration of other interpretation
(9) Tolerating uncertain data.
(10) Involve Asking Questions that can be tested in the world.

3/2/26

General Discussion

17/2/26

* Dualism : The idea that mind or body are separate.

⊙ Body : Physical, material, follows the physical law of nature.

⊙ Mind : Non-physical spiritual doesnot follow physical law of nature

* Why History Important?

→ study different characteristics

→ Knowledge of the people in the past.

→ **Aristotle** (384), first psychologist.

→ Breathe is directly connected to mind and soul and science.

→ **Plato** defines the importance of knowledge and mind.

→ Psychology is **systematic observation** (a highly structured method of recording behaviors, design to collect objectives, reliable & unbiased data by using predefined criteria and coding systems and schemas and trained observations.)

→ Roman pregmentism (Questions raised in mind)

→ Inborn Thoughts (Ideas without any experience) (whether study by science or not).

→ **Rationalism** (Reason or Logic)

→ Hearing
→ Vision
→ Understanding

19/2/26

* According to Science, nervous system deals with our mind and soul.
* Classical theory of Aristotle, Plato will be studied.

26/2/26

SCHOOLS OF THOUGHTS IN PSYCHOLOGY

Structuralism:

→ Focuses on breaking down mental processes into most basic components (soul, mind etc.....)
→ Founder - Wilhelm Wundt and Edward Titchner notable structuralists
→ Introspection (self Examination)

* Systematic observation (scientific methods to record activities of mind).

3/3/26

* **Functionalism:**

→ How our mind function to adapt in different environment is functionalism.
→ What for (کس لیے) and What of.
→ Various Problems and its Solutions for learners
→ E.g: Admission in School (we adapt ourselves for learning)

5/3/26

* **Behaviorism:**

→ J.B Watson, an American psychologist.
→ Negate structuralism and functionalism.
→ Experimental branch of natural science, to elaborate, control

and predict behavior.
→ Responses of nerve or stimuli to the reaction of other sensory organs.
→ Receptors (sense-organs) and effectors (muscles and nerves).
→ Interpretimist (changeable theory, or feelings etc.....)
→ Postivist (Rigidness or the thing is what it is)(Not changeable)

10/3/26 (Online)

❸ Gestalt:

→ Experiences divided into small parts or components
→ Collection or common region of figure background, proximity, continuity, focal point & similarity.
⊙ Figure-ground (Figure the base or ground of the object
→ The role of configuration or organization in the perceptual field and highlight role of

insight and understanding in learning.

⊙ Proximity (relating different things)

⊙ Continuity (shaping the mental processes, the components will be smooth or pattern continuous)

→ Smoothing of experience into components.

17/3/26

⊛ Psychoanalysis:

→ Personality (Traits of person).

→ Mind three parts:

(i) Conscious, (ii) Sub-conscious

(iii) Unconscious

→ Personality aspects:

(i) Id (ii) Ego

(iii) Super-ego

(pleasure) → Id (Instinctive Desires) the qualities by birth in person

→ Moral Values (اخلاقيات)

(reality) → Ego (Reason based on real experience) (E.g: Desire to eat everything!!)

تاریخ: _____ دن: _____

Morality (Unconscious) Super Ego / which teaches to be on limit and follow discipline or manners) (E.g: Gives instant view to eating everything as a bad manner and Keep us within discipline or limit)

(*) E.g: A boy sees something beautiful (Id) (Pleasure)

↓

Attracted and will try to approac (Ego) (Reality)

↓ (Morality) (super-Ego)

Stopped suddenly and think about the scenario results
