The Features of organizations that help explain the differences in organization's use of Information Systems:

Common features of organizations include:

Routines and business processes: Standard operating procedures have been developed that allow the organization to become productive and efficient thereby reducing costs overtime. As employees learn these routines, they become highly productive and efficient, and the firm is able to reduce its costs overtime as efficiency increases.

SOP's (Standard Operating Procedures): The precise rules, procedures, and practices that have been developed to cope with all expected situations.

Organizational Politics: People in organizations occupy different positions with different specialties, concerns, and perspectives. So, they have different viewpoints about how resources, rewards and punishments should be distributed, brings political resistance to organizational change. These differences matter to both managers and employees, and they result in political struggle for resources, competition, and conflict within every organization. Political resistance is one of the great difficulties of bringing about organizational change.

Organizational Culture: Assumptions that define the organizational goals and products create a powerful restraint on change, especially technological change.

Organizational Environments: Reciprocal relationships exist between an organization and environments. Information systems provide organizations a way to identify external changes that might require an organizational response.

Organizational Structure: Information systems reflect the type of organizational structure:

- Entrepreneurial
- Machine Bureaucracy
- Divisionalized Bureaucracy
- Professional Bureaucracy
- Adhocracy

The Impact of Internet and Disruptive Technologies on Organizations:

The internet increases the accessibility, storage and distribution of information and knowledge for organizations. Nearly any information can be available anywhere at any time. The internet increases the scope, depth and range of information and knowledge storage. It lowers the cost and raises the quality of information and knowledge distribution. It lowers transaction cost and information acquisition cost. By using the

internet, organizations may reduce several levels of management, enabling closer and quicker communication between upper levels of management and the lower levels.

Sometimes technology/business innovation rapidly change business environment. Disruptive technologies caused by technological changes can have different affects on different companies depending on how they handle the changes. Some companies create the disruptions and succeed very well. Other companies learn about the disruption and successfully adopt it. (Car, ipod, Disk Drives etc)
